DETAILED ACTION***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: the prior art does not teach the method of producing a new processed image in accordance with the corresponding changed image property parameter until the user is satisfied and an image represented by the new processed image data is displayed on the display wherein when the user is satisfied, the compression process device compresses image data image data corresponding to the processed image data displayed on the display and recording device stores the compressed data.

Furthermore, the prior art teaches the use of a system that retrieves unprocessed data and processes the data based on imaging parameters. Furthermore, the prior art teaches querying whether a user is satisfied with the processed image data and compressing the processed image data and storing the data in a recording medium. The prior art further teaches repeatedly querying a user in order to determine if a setting change is acceptable to a user. However, the prior art does not teach that the image property setting device and the signal processing device work to repeatedly query whether a user is satisfied with the processed image data in the event that changes to the image property parameters are not satisfactory to the user and processing the image data repeatedly based on the image property parameters until the user is satisfied.

Therefore, the claims are allowed over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
